* Low relief model fully glazed with a layer of glaze over the
hall surface of the piece in order to create an unending mosaic
aspect.
The pieces have to be laid without spaces between each other,
that way all the joints will have the same width when re-grout.
If the material will be applied in a wet place there should be used
an epoxy adhesive in order to avoid filtration.

*Modelo con bajorrelieve engobado para rejuntar y que genera
un aspecto final de mosaico sin fin.
Las piezas se deben colocar sin separación entre ellas, para que
todas las juntas queden con el mismo ancho cuando se rejunte.
En caso de ir en una zona con salpicadura de agua deberá
rejuntarse con mortero epoxídico para impedir posibles
filtraciones a través de la junta.

* Low relief model fully glazed with a layer of glaze over the hall surface of the piece in order to create an unending mosaic aspect. The pieces have to be laid without spaces between each other, that way all the joints will have the same width when re-grout. If the material is used in a wet area, an epoxy adhesive should be applied, to avoid water filtration.

* Modelo con bajorrelieve engobado para rejuntar y que genera un aspecto final de mosaico sin fin. Las piezas se deben colocar sin separación entre ellas, para que todas las juntas queden con el mismo ancho cuando se rejunte. En caso de ir en una zona con salpicadura de agua deberá rejuntarse con mortero epoxídico para impedir posibles filtraciones a través de la junta.

* Low relief model fully glazed with a layer of glaze over the
hall surface of the piece in order to create an unending mosaic
aspect. The pieces have to be laid without spaces between each
other, that way all the joints will have the same width when re-
grout. If the material will be applied in a wet place there should
be used an epoxy adhesive in order to avoid filtration.

* Modelo con bajorrelieve engobado para rejuntar y que genera
un aspecto final de mosaico sin fin. Las piezas se deben colocar
sin separación entre ellas, para que todas las juntas queden
con el mismo ancho cuando se rejunte. En caso de ir en una
zona con salpicadura de agua deberá rejuntarse con mortero
epoxídico para impedir posibles filtraciones a través de la junta.

** Special Product: Due to hand-manufactured process the
caliber and tonality of these borders could vary from one to
other.Clean only using neutral PH products.

Do not mix pieces from different lots.
** Producto Especial: Este material se fabrica artesanalmente,
por lo que pueden existir variaciones en el calibre o en el tono.
Usar para su limpieza únicamente productos con PH neutro. No
mezclar piezas de diferentes lotes.

* Trend is available in 5 different aleatory reliefs.
Trend está disponible en 5 relieves diferentes y aleatorios.

*Special product. Due to hand-manufactured process in velvet finish (textile), the tonality could vary from one to another. Use exclusively as wall coverings in non-humid areas. Fix with dispersion adhesives of type D1 or D2. Do not grout. In order to clean use just a slightly humid cloth and take care not to exert too much pressure. Do not mix pieces from different lots.

*Producto especial. Este material se fabrica artesanalmente en acabado terciopelo (textil), por lo que pueden existir variaciones en el tono. Utilizar exclusivamente para revestimiento de zonas no húmedas. Colocar con adhesivos en dispersión tipo D1 o D2. No juntar. Utilizar solamente un trapo húmedo para su limpieza sin ejercer demasiada presión sobre la pieza. No mezclar piezas de diferentes lotes.

Technical Solutions / Soluciones Técnicas

Digital Printing / Impresión Digital

The digital printing system is a process of decorating ceramic pieces using an ink-jet application (CMYK) which enables the development of high quality photo reproductions (including images, drawings, text, logos, etc...), maintaining the high performance of our ceramic products.

With this digital process of decoration we achieve a greater realism in the printed photograph or picture of the piece, because through this system we can obtain high printing resolutions.

Another advantage of this system is the ecological aspect, since by using only four colors (CMYK), the number of materials used in the production are substantially reduced, thereby reducing the extraction of these materials and its environmental impact.

El sistema de impresión digital es un proceso de decoración de piezas cerámicas, mediante una aplicación de inyección (CMYK) que posibilita el desarrollo de piezas con reproducciones fotográficas en alta calidad (ya sean imágenes, dibujos, textos, logotipos,...etc), manteniendo las elevadas prestaciones de nuestro producto cerámico.

Con este proceso digital de decoración se consigue un mayor realismo en la fotografía o dibujo impresa en la pieza, ya que se pueden obtener unas resoluciones más altas de impresión que las conseguidas hasta ahora.

Otra de las ventajas de este sistema es el aspecto ecológico, ya que al utilizar 4 colores (CMYK) se reducen sustancialmente el número de materiales utilizados en producción, reduciendo así la extracción de los mismos y su impacto medioambiental.

Water Jet / Corte de Agua

Porcelain.Porcelánico

A water jet cutter is a tool capable of slicing into porcelain tiles or other materials using a jet of water at high velocity and pressure, or a mixture of water and an abrasive substance. The process is essentially the same as water erosion found in nature but accelerated and concentrated by orders of magnitude. Water jet cutters are capable of producing rather intricate cuts in porcelain tiles, in other way impossible to obtain.

The advantages of this process go beyond the final visual results.

- The result shows a more precise cut, avoiding torns or unstructured shapes when handling the product.
- Allows precise cuts on thicker pieces with lower net weight.
- And finally, it's more environmental friendly, since it is gas and pollution free.

Una cortadora por chorro de agua es una herramienta capaz de cortar porcelánico u otros materiales usando un chorro de agua a alta velocidad y presión, o una mezcla de agua y una sustancia abrasiva. El proceso es esencialmente el mismo que la erosión del agua produce en la naturaleza pero acelerado y concentrado en órdenes de magnitud. Las cortadoras por chorro de agua son capaces de producir intrincados cortes en el porcelánico, de otra forma imposibles de conseguir.

Las ventajas de este proceso van más allá de las meramente estéticas:

- El corte es de mejor calidad, ya que no produce desgarrs ni deformaciones por esfuerzos de corte o aportación de calor.
- Permite cortes de mayor espesor y menor ancho de malla.
- No produce gases ni polución.

PVD Guidelines / Guia PVD

Gold and Silver Coated Decor Tiles

Physical Vapor Deposition (PVD)

PVD is a field in the application of nanotechnology. The process consists of depositing layers of atoms, inside a vacuum chamber, to a solid surface. The layering is produced by the condensation of a vaporized metal (such as gold, titanium, platinum etc.) over the selected surface.

PRE-INSTALLATION

- Our ceramic products are a finishing product within the construction process, so we advise to install them once other building works have been completed i.e. structures, masonry, flooring, ceilings... This will minimize the collateral damage that may occur when the product is installed too soon.
- Upon receiving the tiles it is essential to check if the tone, size and quality meet the required standards in advance, as well as assuring the lack of any visible surface defects. In case of facing any problems, our technical team will be able to study these when informed before having installed the product.
- These pieces are very delicate and should be treated with care at all times. Inappropriate handling (scratching and rubbing) as well as the use of abrasive products may cause irreparable damage to the pieces.
- There will always be tonality differences between batches, thus it is recommended to order in excess to avoid shortages of material to make sure material from the same batch is supplied.

INSTALLATION

The support base for wall or floor for the tiles must be stable, dry, flat and it must have the adequate consistency. This base must never be too hot or too cold and should be clean. One must not forget to clean any dust, grease or oil leftovers to facilitate an optimal adhesion.

Once the pieces have been properly installed, proceed immediately to remove the remnants of the installation materials with a soft and clean sponge and clean water without rubbing on the pieces.

The recommendation for the grouting of the pieces is to use fine-grained or controlled granulometry (CG.2 according to EN 13888) materials without additives. Clean immediately after grouting with a clean sponge and clean water, while the grout is still humid and is easily removable.

TILE MAINTENANCE AFTER INSTALLATION

This type of tiles require following these recommended guidelines, shown below, for cleaning:

- In general, one must use non-aggressive and neutral pH product.
- In general, the use of ammonia-based products (NH3), always diluted in water, never directly on the piece, is recommended.
- One cannot use chemically aggressive products.
- One cannot use products with hydrochloric acid (HCl). The remaining acid products should be used with caution in very diluted concentrations.
- Citric acid and other acidic food products leave stains if left too long to act on the tile. They must be removed as soon as possible.
- The use of powder products of abrasive action is not recommended.
- A damp cloth and neutral liquid soap will be enough.

Azulejos decorados oro y plata

Physical Vapor Deposition o PVD es un campo en la aplicación de la nanotecnología. El proceso consiste en depositar capas de átomos, dentro de una cámara de vacío, sobre una superficie sólida. La estratificación se produce por la condensación de un metal vaporizado (como oro, titanio, platino, etc.) sobre la superficie seleccionada.

PRE-INSTALACIÓN

- Nuestros productos de cerámica son un producto decorativo dentro del proceso de construcción, por lo que recomendamos instalarlos una vez que se hayan completado otros trabajos de construcción, es decir, estructuras, mampostería, pisos, techos ... Esto minimizará el daño colateral que puede ocurrir cuando el producto es instalado demasiado pronto.
- Al recibir estos azulejos, es esencial verificar si el tono, el tamaño y la calidad cumplen con los estándares requeridos por adelantado, así como también asegurar la ausencia de defectos superficiales visibles. En caso de que surja algún problema, nuestro equipo técnico podrá estudiarlos cuando estén informados antes de haber sido instalado el producto.
- Estas piezas son muy delicadas y deben tratarse con mucho cuidado en todo momento. La manipulación inadecuada (arañazos y roces) y el uso de productos abrasivos pueden causar daños irreparables en las piezas.
- Siempre habrá diferencias de tonalidad entre diferentes lotes, por lo que se recomienda hacer un pedido en exceso para evitar la escasez de material durante la obra y así poder asegurar el suministro de material del mismo lote.

INSTALACIÓN

La base de soporte para la pared o el piso de las baldosas debe ser estable, seca, plana y debe tener la consistencia adecuada. Esta base nunca debe estar demasiado caliente o demasiado fría y debe estar limpia. No debe olvidarse de limpiar el polvo, la grasa o los restos de aceite para facilitar una adhesión óptima. Una vez que las piezas se hayan instalado correctamente, proceda de inmediato a eliminar los restos de los materiales de instalación con una esponja suave y limpia con agua completamente limpia sin frotar las piezas bruscamente.

La recomendación para el rejuntado de las piezas es utilizar materiales de granulometría de grano fino o controlada (CG.2 según EN 13888) sin aditivos. Limpie inmediatamente después de la lechada con una esponja limpia y agua limpia, mientras que la lechada todavía está húmeda y es fácilmente removible.

MANTENIMIENTO DE AZULEJOS DESPUÉS DE LA INSTALACIÓN

Este tipo de azulejos requieren seguir estas pautas recomendadas, que se muestran a continuación, para la limpieza:

- En general, se debe usar un producto de pH neutral y no agresivo.
- En general, se recomienda el uso de productos a base de amoníaco (NH3), siempre diluidos en agua, nunca directamente en la pieza.
- No se pueden usar productos químicamente agresivos.
- No se pueden usar productos con ácido clorhídrico (HCl). Los productos ácidos restantes deben usarse con precaución en concentraciones muy diluidas.
- El ácido cítrico y otros productos alimenticios ácidos dejan manchas si se dejan demasiado tiempo para actuar sobre las baldosas. Deben eliminarse lo antes posible.
- No es recomendable el uso de productos en polvo de acción abrasiva.
- Un paño húmedo y jabón líquido neutro serán suficientes.

Advices for cleaning / Consejos de limpieza

CARE TO BE TAKEN DURING THE CONSTRUCTION

Our ceramic products can be considered as a final finish in the construction process, so it is advisable to be laid only when the rest of the building works are complete (structures, masonry, flooring, ceilings...); specially the flooring. This will minimize the collateral damage that sometimes occurs when the product is being placed too soon. When ceramic tiles are placed before the end of the construction, one must take special care to protect the piece until the works are finalized.

PRE-FIXING ISSUES

- Upon receiving porcelain tiles it is essential to check if the tone, size and quality meet the required standards in advance, as well as assuring the lack of any visible surface defects. In case of facing any problems, our technical team will be able to study these when informed before laying the product.
- One must choose the proper tools for laying ceramic products (serrated edged comb, rubber mallet, suction cups, spreaders and clamps for laying, jointing rubber float, ...)
- Mix pieces from different boxes.

SUPPORT BASE PREPARATION

The support base for wall or floor for the tiles must be stable, dry, flat and it must have the adequate consistency. This base must never be too hot nor too cold and should be clean. One must not forget to clean any dust, grease or oil leftovers to facilitate an optimal adhesion. It is convenient to use slightly rough support bases, altering any excessively smooth leveling layer, in order to ensure greater adherence.

ADHESIVE CHOICE

The type of adhesive will be determined by the water absorption of each type of tile. In our case, it is advisable to employ the technique of placing a thin layer of cement adhesive of type C1 for wall tiles and tipe C2 for floor tiles.

Please pay special attention to the recommendations for maintenance and use which are included in the inside of the boxes of each decorative and/or special piece.

For formats larger than 30x30cm, we recommend the double-layer-adhesive. This technique involves the appliance of adhesive on the support base as well as on the tile; this technique is strongly recommended for outdoors. The bonding material must be applied with serrated edged comb to achieve a homogeneous adhesive distribution throughout the laying surface, even in the corners of the tile. A non-uniform adhesive layer will cause tensions on the tile, which will create an “eyebrow” effect. It is advisable to follow the instructions of the adhesives manufacturer, particularly for different cement-based bonding materials.

TILE INSTALLATION

The previous handling of the tiles, especially the rectified, must be done with utmost care to avoid scratches or chipping of the tiles. During the fixing process, the surface shall not be marked by graphite materials (pencils) or permanent markers, especially in the case of polished products to avoid potential cleaning problems.

In the placement of tiles the use of at least 2mm spreaders is advisable. For locked placement, it is advisable to fix at a distance from 1/3 of the piece, never at half of the piece. In large format porcelain pieces (over 60cm of any of its sides) it is convenient to use leveling clips to ensure the flatness of the pieces (or similar leveling system, although there may be other manufacturers recommended in the market).

JOINTS AND GROUTS

The main functions of installation joints are: to absorb deformations of the support, to increase surface adhesion between the parts and the bonding material, and to improve the impermeability of the surface.

It is necessary to respect the indications given below:

- **Structural joints:** the construction project already takes into account the existence of these joints in the floor coverings. These must also abide when covering the joint with plastic trims.
- **Perimeter joints:** it is always appropriate to provide these joints that isolate the tile and bonding material from any structural movements, avoiding tensions with them. Perimeter joints are normally hidden by the skirting board or the tile itself; they must have a width of 5 to 10 mm, and may be empty or filled with deformable material.
- **Expansion joints:** allow deformations due to thermal and hygroscopic variations between tiles between the bonding material and the support base. Usually designed with a width of 5-8 mm and surfaces from 25 m2 (in sections of 5x5 m2) indoor and surfaces from 9 m2 (in sections of 3x3 m2) outdoors. These joints must be well executed, this means that they must be flexible, waterproof, well bonded and must reach the base support.
- **Installation joints:** those between tiles. Before grouting these must be empty, without any bonding materials. It is not recommended to fix any floor without joints, advising a minimum joint of 2-3 mm The grout used in installation joints must be applied with a rubber float. The market offers a wide range of grouts, which are suitable for each type of tile and temperature as specified by the manufacturer of the grout, in which the type of product to be used, colors and waiting time before grouting should be recommended.

Before grouting, it is advisable to test a small area of the part to determine whether the chosen grout affects or stains the surface of the piece. In this case, one should contact the grout manufacturer. Ask the manufacturer for a suitable cleaner for this type of grip material. A bonding material with a thin granulometry is desirable in order to avoid scratches on the tile during its placement.

CUIDADOS A SEGUIR DURANTE LA CONSTRUCCIÓN

Nuestros productos cerámicos se pueden considerar acabados finales en la construcción, por ello es recomendable ser colocados sólo cuando el resto de los trabajos constructivos hayan finalizado (estructuras, mampostería, solados, techos, instalaciones,...) y en especial los productos porcelánicos para suelos. De este modo se minimizarán los daños que pueden experimentar el producto cerámico por haber sido colocados demasiado pronto. Cuando los productos cerámicos son colocados antes de finalizar la construcción hay que tener especial cuidado para proteger la pieza hasta que se ponga en servicio normal de utilización.

CUESTIONES PREVIAS A LA COLOCACIÓN

- Al recibir los productos cerámicos es importante previamente comprobar si el tono, calibre y calidad son los requeridos, así como la existencia de defectos superficiales visibles.
- Hay que elegir las herramientas y útiles adecuados para la colocación de los productos cerámicos (llana metálica dentada, maza de goma, ventosas, crucetas y grapas para la colocación, llana de goma para rejuntar, ...)
- Hay que mezclar piezas de varias cajas.

PREPARACIÓN DEL SOPORTE

El fondo o soporte para pared o suelo sobre el que se colocarán las baldosas debe estar estable, seco, nivelado o aplomado con la consistencia adecuada, no debiendo estar ni helado ni excesivamente caliente y limpio sin restos de polvo, grasa o aceite. Es conveniente disponer de soportes rugosos alterando los soportes excesivamente lisos o la propia capa de nivelación ligeramente para garantizar mayor adhesión.

ELECCIÓN DEL ADHESIVO

La elección del tipo de adhesivo vendrá determinada por la absorción del agua de cada tipo de baldosa. En nuestro caso, se aconseja emplear la técnica de colocación en capa fina con el uso de Adhesivos Cementosos tipo C1 para revestimientos cerámicos, y tipo C2 para pavimentos cerámicos.

En el caso de piezas complementarias/decorativas, prestar especial atención a las recomendaciones de colocación y uso indicadas en el interior de las cajas segun modelos.

Para grandes formatos superiores a 30x30cm, se recomienda la técnica de colocación de doble encolado, esto es, aplicar adhesivo sobre el soporte y en la baldosa, en especial en exteriores. El material de agarre debe aplicarse con una llana dentada para conseguir una distribución del adhesivo homogénea por toda la superficie de colocación incluso en las esquinas de la baldosa, presionando la baldosa sobre el adhesivo todavía fresco. De no ser uniforme la capa de adhesivo provocará tensiones en la baldosa que generan a la larga el efecto “ceja”. Es conveniente seguir las instrucciones del fabricante de adhesivos, en especial para los soportes diferentes de base cementosa.

COLOCACIÓN DE LAS BALDOSAS

La manipulación previa de las baldosas, en especial las rectificadas, ha de realizarse con el máximo cuidado, para evitar despuntados, rayas o desconchados en su superficie. Durante la colocación, no deberá marcarse la superficie de utilización del material con lápices (grafito) o rotuladores indelebles, especialmente en el caso de los productos pulidos para evitar posibles problemas de limpieza de los mismos. En la colocación de las baldosas se recomienda el uso de crucetas de al menos 2 mm. En colocación trabada es aconsejable la colocación a una distancia de 1/3 de la pieza, nunca a la mitad de la pieza. En pavimentos de grandes formatos (mayores de 60 cm en alguno de sus lados) es conveniente el uso de grapas de colocación para garantizar la planitud de las piezas (se recomienda el uso de sistemas de nivelación).

LAS JUNTAS Y REJUNTADOS

Las principales funciones de las juntas de colocación son: absorber deformaciones del soporte, aumentar la superficie de adherencia entre las piezas y el material de agarre, y mejorar la impermeabilidad de la superficie.

Es conveniente respetar las juntas que se indican a continuación:

- **Juntas estructurales:** el proyecto constructivo ya tiene prevista la existencia de estas juntas en el solado que se deben respetar también al colocar las baldosas y éstas se deben recubrir con materiales deformables.
- **Juntas perimetrales:** siempre es conveniente prever estas juntas que aíslan la baldosa y al adhesivo de los movimientos de otros elementos estructurales constructivos como paredes-suelos, pilares o puertas-ventanas, evitando tensiones con ello. Normalmente quedan ocultas por el rodapié o la propia baldosa, deben tener una anchura de 5 a 10 mm, y pueden quedar vacías o rellenas de material deformable.
- **Juntas de dilatación:** permiten las deformaciones por variaciones térmicas e higroscópicas entre baldosas, adhesivo y soporte. Normalmente se diseñan con una anchura mínima de 5 a 8 mm y en superficies a partir de 25 m2 (en paños de 5x5 m2) en interiores y en superficies a partir de 9 m2 (en paños de 3x3 m2) en exteriores. Estas juntas deben estar bien ejecutadas, esto es, ser flexibles, impermeables, bien adheridas y llegar hasta el soporte base.
- **Juntas de colocación:** son las existentes entre baldosa y baldosa. Antes del rejuntado estas juntas deben estar vacías, por tanto sin materiales de agarre de la construcción. Se desaconseja una colocación a junta unida o a “testa” aconsejándose una junta mínima de 2-3 mm.

El material de rejuntado que se utiliza en las juntas de colocación se debe aplicar con una llana de goma. En el mercado existe una amplia gama de materiales de rejuntado, que se adecua a cada tipo de baldosas y ambiente según especificaciones del fabricante del material de rejuntado en las que se debe recomendar el tipo de producto a emplear, colores y tiempo de espera hasta el comienzo del rejuntado. Antes del rejuntado, es conveniente probar en un área pequeña de la pieza para determinar si la lechada elegida decolora o mancha la superficie de la pieza, en cuyo caso hay que contactar con el fabricante del material de rejuntado. Pedirle al fabricante del rejunte un limpiador adecuado para este tipo de material de agarre. Es conveniente que la granulometría del material de rejuntado sea fina, para evitar posibles rayas en la baldosa en su colocación.

Advices for cleaning / Consejos de limpieza

LA PRIMERA LIMPIEZA DESPUÉS DE LA COLOCACIÓN

La operación de limpieza más importante se lleva a cabo inmediatamente “después de la colocación de la baldosa”. Esto implica la eliminación completa de los residuos de lechada y de la suciedad de la colocación de las propias baldosas. Una eliminación inadecuada o tardía de estos residuos puede crear sobre la baldosa una película cementosa capaz de absorber toda forma de suciedad, dando la impresión que se ensucia la baldosa, cuando el problema está en la película superficial de suciedad. Una vez efectuado el rejuntado de las baldosas, es importante cuando el material de rejuntado todavía está fresco, eliminar el material sobrante cuidadosa e inmediatamente, utilizando para ello una esponja y agua limpia abundante, repitiendo esta operación tantas veces como sea necesario. No debe realizarse la limpieza del material con espátulas metálicas ni estropajos abrasivos. En el caso de manchas resistentes, limpiar con alcohol y agua caliente y frotar con un paño limpio. Si no desaparecen, consultar con el departamento técnico correspondiente. Una vez efectuado el lavado mencionado arriba, deberá efectuarse un lavado básico o alcalino utilizando detergentes desengrasantes, ya que el lavado ácido puede dejar una untuosidad sobre el pavimento que podría contribuir a retener la suciedad. En aquellas zonas donde el agua sea calcárea conviene secar la superficie para evitar la deposición de carbonatos que disminuyen el brillo superficial.

EL MANTENIMIENTO REGULAR

Muchos productos de limpieza de uso general que están disponibles son aceptables para el uso en nuestros productos. Se puede emplear para la limpieza diaria detergentes o desengrasantes diluidos en agua caliente, según indicaciones del envase del limpiador. Es importante que el limpiador no tenga base de aceite, grasa animal, o jabón. Estos componentes pueden dejar un residuo invisible al atrapar la suciedad (estratificaciones de cal de detergente o residuos de suciedad). También es importante que la baldosa reciba un enjuague a fondo con agua limpia después que el proceso de limpieza se haya completado.

La densidad inherente y baja absorción de agua de todos los productos aseguran un producto que es fácil de mantener. No requieren el uso de selladores o ceras. Estos recubrimientos superficiales pueden realmente afectar negativamente el rendimiento de la baldosa. Es muy importante tener en cuenta que el ácido Fluorhídrico (HF) y derivados pueden dañar irremediablemente la baldosa.

Los pasos generales de limpieza regular para nuestros productos cerámicos se pueden resumir del siguiente modo:

- Retirar cualquier residuo sólido o líquido de la baldosa, barriendo con una escoba de cerdas suaves o pasar la aspiradora.
- Limpiar los derrames líquidos tan pronto como sea posible.
- Aplicar la cantidad y dilución del limpiador recomendadas para la baldosa (ver indicaciones del fabricante del limpiador). El limpiador deberá permanecer en la baldosa un periodo mínimo de tiempo de 5 minutos.
- Para baldosas sin pulir, frotar con una esponja de nylon o un cepillo de cerdas suaves. Para superficies muy sucias puede usarse una máquina de piso equipado con una almohadilla de nylon o con un cepillo de cerdas. Para baldosas pulidas , limpie con un trapo no abrasivo o un paño.
- Retirar la solución de limpieza sucia y el agua con una aspiradora o un trapo. Enjuague la pieza con agua limpia y retire de nuevo con una aspiradora, fregona, o una toalla. Es absolutamente esencial para todos los residuos de detergente que se eliminen por completo de la baldosa. Cualquier resto de detergente que se seque sobre la baldosa puede formar un recubrimiento que puede atrapar la suciedad y será muy difícil de eliminar. La baldosa debe enjuagarse varias veces para eliminar todos los residuos de detergente.

Durante su uso, la limpieza de la baldosa debe hacerse de forma similar a la limpieza de cristales. Se puede emplear productos de tipo amoniacal e incluso lejía, ambos diluidos en agua. En caso de manchas particulares y/o especialmente resistentes, es aconsejable usar detergentes específicos según especificaciones del fabricante del limpiador. No hay que olvidar que la eliminación de cualquier tipo de mancha resulta más fácil cuando ésta todavía está fresca. Es importante hacer siempre una prueba previa antes de usar los productos detergentes.

En el caso de piezas complementarias/decorativas, prestar especial atención a las recomendaciones de colocación y uso indicadas en el interior de las cajas segun modelos.

BALDOSAS CON EFECTOS METÁLICOS / PVD

En este tipo de baldosas por su especificidad se recomienda seguir las siguientes pautas de limpieza:

- En general, se puede usar cualquier producto no agresivo y con PH neutro.
- En general, se recomienda el uso de productos con base amoniacal (NH3) en concentración rebajada, nunca directamente sobre la pieza.
- No se pueden usar productos agresivos químicamente.
- No se puede usar productos con ácido clorhídrico (HCl). El resto de productos ácidos deben usarse con precaución en concentraciones muy rebajadas.
- El ácido cítrico y otros productos alimentarios ácidos dejarán mancha si se les deja actuar mucho tiempo sobre la baldosa.
- No está recomendado el uso de productos en polvo de acción abrasiva.

BIBLIOGRAFIA:

- “MANUAL - TECHNICAL GUIDE OF WALL AND FLOOR CERAMIC COVERINGS”, Institute of Ceramic Technology (ITC).
- “ELECTRONIC GUIDE OF THE TECHNOLOGY OF CERAMIC TILE PLACEMENT (Placement Project)”, Institute of Ceramics Promotion (CPI)
- “TECHNICAL GUIDE OF THE APPLICATION OF WALL AND FLOOR CERAMIC COVERINGS”, Tile Newspaper (AZ Publications)

THE FIRST CLEANING “AFTER INSTALLATION”

The most important cleaning operation is performed immediately after laying the tiles. This involves the complete removal of residues and dirt from the tile placement. An inadequate or late removal of this waste can create a cementitious layer on the tile capable of absorbing all forms of dirt. This may give the impression that the tile gets dirty when the actual problem resides in the surface film of dirt which was not removed immediately after laying.

Once the grouting of the tiles is finished, it is important, while the grout is still wet, to carefully remove any excess material immediately. This can be done using a sponge and plenty of clean water, repeating this as many times as necessary.

Do not perform the cleaning with metal tools, scrapers or abrasive pads. For stubborn stains, clean with alcohol and lukewarm water and rub with a clean cloth. If they do not disappear, check with the relevant technical department.

Once the above mentioned washing is done, another washing should be carried out using basic or alkaline degreasing agents, as acid washing can leave stickiness on the pavement which could help retain dirt. In areas where water is calcareous, it is convenient to dry the surface, in order to prevent the deposition of carbonates which will reduce the surfaces' gleam.

REGULAR MAINTENANCE

Many available cleaning products for general use can be used with our products. For daily cleaning, one can use detergents or degreasing products diluted in warm water, following each product's instructions.

It is important that the cleaner does not have oil, animal fat, or soap base. These components may leave an invisible residue whilst absorbing dirt (lime stratifications detergent or residues). It is also important that the tile receives a thorough rinsing with clean water after the cleaning process is complete.

The low water absorption and high standards met by all porcelain tiles ensure a product which is easy to maintain. Our products do not require the use of sealants or waxes. These superficial coatings can really affect the performance of the tile in a negative manner. It is important to note that hydrofluoric acid (HF) and derivatives can irreparably damage the tile.

The general steps for regular cleaning of our ceramic products can be summarized as follows:

- Remove any solid or liquid waste from the tile, sweeping with a soft bristle broom or vacuuming.
- Clean up liquid spills as soon as possible with lukewarm water.
- Apply the recommended amount and dilution of the cleaner for the tile (follow the cleaner manufacturer's instructions). The wiper must remain in the tile a minimum period of 5 minutes.
- For unpolished tiles, scrub with a nylon sponge or soft bristle brush. A floor machine equipped with a nylon pad or bristle brush can be used for heavily soiled surfaces. For polished tiles, clean with a nonabrasive cloth.
- Remove the dirty cleaning solution and water with a vacuum cleaner or cloth. Rinse the porcelain tile with clean water and remove again with a vacuum cleaner, mop or towel. It is absolutely essential that all detergent residues are removed completely from the tile. Any remaining detergent that dries on the tiles surface can form a coating that can trap dirt and be very difficult to remove. The tile should be rinsed several times to remove all detergent residues.

During use, the cleaning of the tiles should be similar to window cleaning. Ammonia and even bleach type products can be employed, but both must be diluted in water.

In case of special stains and/or particularly resistant, it is advisable to use specific detergents according to the cleaners' manufacturer. Do not forget that removing any type of stain is easier when it is still fresh.

It is important to always do a pre-test the detergent products result on a small sample of the porcelain.

Please pay special attention to the recommendations for maintenance and use which are included in the inside of the boxes of each decorative and/or special piece.

TILES WITH METALLIC EFFECTS - PVD

This type of tiles require following these recommended guidelines, shown below, for cleaning:

- In general, you can use any non-aggressive and neutral pH product.
- In general, we recommend the use of ammonia-based products (NH3) diluted in water, never directly on the piece.
- You cannot use chemically aggressive products.
- You cannot use products with hydrochloric acid (HCl). The remaining acid products should be used with caution in very diluted concentrations.
- Citric acid and other acidic food products leave stains if left too long to act on the tile. They must be removed as soon as possible.
- The use of powder products of abrasive action is not recommended.

Laborarory Tests / Certificados de Laboratorio

CERÁMICAS APARICI carries out laboratory tests to set the technical characteristics of each one of its products (measurements and surfaces appearance) and certify that it aplies the current norms.

CERÁMICAS APARICI realiza ensayos de laboratorio para determinar las características técnicas de cada uno de sus productos (medidas y aspecto superficial) y certificar que se cumple con la normativa vigente.

Certifications issued by the following OFFICIAL BODIES:
Certificados emitidos por los siguientes ORGANISMOS OFICIALES:

Products manufactured and commercialized by APARICI meet all the norms required by Spanish manufactured goods, imposed by the Spanish and the European Laws concerning environmental issues. These legal requirements have encouraged us even further when setting our own internal goals; leading to a minimization of environmental impacts which may arise during our manufacturing process.

Los productos fabricados y comercializados por APARICI cumplen en materia medioambiental con la normativa exigible por la legislación Española y Europea aplicable a los productos elaborados en España. Este imperativo legal nos ha motivado más si cabe a marcarnos nuestros objetivos internos para minimizar al máximo los impactos medioambientales derivados de nuestro proceso productivo.

60% Recycled material used in production up to 60%.
Material reciclado usado en producción hasta un 60%.

100% Under the maximum authorized level for pollutant gas emissions.
Nivel de emisiones de contaminantes a la atmósfera inferior al límite autorizado.

100% Cardboard and wood packaging managed by SIG from ECOEMBES.
Envases y embalajes de cartón y madera gestionados por el SIG de ECOEMBES.

100% Waste management handled through an authorized company.
Gestión de residuos peligrosos y no peligrosos por gestor autorizado.

100% Recycling of industrial sewage water.
Reutilización de aguas residuales industriales.
